About us

Effective management of our scarce water resources requires understanding the complex issues involved to meet the expectations of residential communities, and the objectives of the agricultural, mining and water industries.

Ecwise Environmental provides water-related and environmental consulting services to clients across Australia. With a strong technical background in environmental science, engineering and natural resource management, our team has the skills and resources required to help improve management of your water and environmental risks.

With experience in catchments, mining, industrial, regional and urban environments, Ecwise delivers customised, and integrated environmental solutions to meet a range of requirements.

By working in partnership with our clients, Ecwise has developed and implemented reliable, on time and cost-effective advice that addresses regulatory and operational objectives in diverse and complex environments.

Ecwise's quality management systems are designed to facilitate effective delivery to clients and are compliant with AS/NZS ISO 9001:2000.

Our services

Catchment management

Planning, implementing and monitoring catchment management programs for water utilities, natural resource management groups and catchment management authorities.

Drinking water quality

Investigation, HACCP, risk management, audits, water quality monitoring programs, process design, pilot plants, and drinking water quality management systems.

Water reuse

Investigation, conceptual design, procurement advice, risk management, planning, process validation/verification, process design, pilot plants and auditing of water reuse systems and other sustainable water sources, including wastewater reuse, stormwater harvesting, rainwater tanks, on-site sewerage systems, and greywater reuse.

Industrial water

Investigations, designs and operational advice relating to industrial water and wastewater systems, including cleaner production, waste reuse and recycling, industrial environmental audits, trade waste assessments, and resource efficiency assessments.

Environmental management

Environmental management planning and audit, waste management, environmental risk assessment, annual reporting and project management.

Ecological assessment

Monitoring, interpretation and management planning for riverine, wetland, lake estuarine, coastal, marine, groundwater and terrestrial ecosystems.

The Ecwise difference

Service delivery

Ecwise has staff in regional offices to serve local business demands, delivering services around Australia.

Research and Development program

The Ecwise R&D program provides leading edge knowledge to assist with solving real industry problems.

Client focused

Our team knows the importance of delivering solutions within budget and on time, providing a personal service to your business.

Complementary business lines

We manage multidisciplinary projects involving other Ecwise services such as GIS, analytical and monitoring services.
