## About us

It has become increasingly important to accurately measure the volume and quality of available water resources to adequately plan for future growth, either for potable consumption or to determine sustainable water supplies for production in industry and agriculture.

With over 50 years experience, the Ecowise Environmental team has the technical expertise and knowledge to deliver tailored environmental monitoring, measurement and data services through a national network of offices and service centres.

Data can be delivered directly to clients through a password protected web page for ready access, via daily email, or SMS.

In addition to an extensive product range, our Instrument Group specialises in custom building systems such as hydrological and meteorological systems, with options for data acquisition, measurement and control to meet your specific requirements.

With experience in catchments, mining, industrial and urban applications, Ecowise personnel deliver customised, and integrated environmental solutions to meet a range of requirements.

By working in partnership with our clients, Ecowise develops and implements reliable, on time and cost-effective environmental management solutions that address regulatory and operational objectives in diverse environments.

## Our services

### Water resource management

Design, assembly, installation, commissioning, operation, maintenance of water quantity and quality monitoring stations, sampling, field analysis, data collection, interpretation and reporting.

### Water infrastructure management

Water quantity and quality monitoring on a range of water infrastructure, including sewer gauging, bathymetric surveys, sampling, field analysis, data collection, interpretation and reporting.

### Meteorological monitoring

Design, assembly, installation, commissioning, operation, maintenance of meteorological monitoring stations, including temperature, rainfall, wind, humidity.

### Dust, air and noise monitoring

Design, assembly, installation, commissioning, operation, maintenance of dust, air and noise monitoring stations, data collection, interpretation and reporting.

### Compliance monitoring

Design, operation and audit of licence and regulatory compliance monitoring programmes, including water, dust, air and noise impacts for water and industrial mine sites, including preparation of compliance reports.

### Remote Data Access

Design, operation and audit of remote data access solutions including telemetry, data storage, Hydstra, GIS integration, data analysis and reporting.

## The Ecowise difference

### Service Delivery

Ecowise has staff in regional offices to serve local business demands, delivering services around Australia.

### Instrument Group

Our Instrument Group provides leading edge instrument design and assembly services, building high quality instrumentation from the world's best components.

### Client focused

Our team knows the importance of delivering solutions within budget and on time, providing a personal service to your business.

### Complementary business lines

We manage multidisciplinary projects involving other Ecowise services such as GIS and analytical services.

### R&D program

The Ecowise R&D program provides leading edge knowledge to assist with solving real industry problems.
